

POOR HOUSEKEEPING HAZARDS

A CLEAN JOB SITE STUDY GUIDE

INTRODUCTION

Poor housekeeping is one of the top 10 most-cited OSHA violations on construction sites.

At Charge, we work in active parking structures, commercial buildings, and tight electrical spaces. A messy job site can turn a simple task into a serious injury in seconds.

Good housekeeping is simple. Awareness is critical. This module shows the hazards and how to prevent them.

WHY IT MATTERS

- Clutter causes most preventable injuries
- Tripping and struck-by incidents stop work
- Blocked exits and fire hazards put everyone at risk
- A clean site keeps us productive and professional

COMMON HAZARDS CAUSED BY POOR HOUSEKEEPING

Tripping & Walking Hazards

- Cords, hoses, and tools left on floors
- Scrap metal, packaging, and debris
- Blocked walkways and stairs

Struck-By & Falling Objects

- Unsecured materials on shelves or ladders
- Loose conduit or charger parts
- Piles of trash that can collapse

Fire & Emergency Hazards

- Flammable waste near work vans or panels
 - Blocked fire extinguishers and exits
 - Clutter around electrical equipment

If it can trip you, fall on you, or catch fire — clean it up first.

WHAT DAMAGE LOOKS LIKE

Tripping injuries & sprains

Struck-by injuries (head, hands, feet)

Fires and burns

Lost work time & OSHA citations

Small mess. Big impact.

HOW TO PREVENT HOUSEKEEPING INJURIES

Stop. Think. Clean before you leave.

- What could trip me or someone else?
- Are materials secured and put away?
- Are cords coiled and off the floor?
- Are exits and fire equipment clear?
- Did I clean up at the end of the task?

Five minutes of cleanup prevents weeks of downtime.

FIELD CHECKLIST

- Walkways and work areas clear
- Cords and hoses coiled and stored
- Scrap and packaging thrown away in the proper receptacles
- Fire extinguishers and exits unobstructed
- Tools and materials put back in place

KEEP YOUR JOB SITE CLEAN
