

HEARING PROTECTION

PROTECT YOUR HEARING. PREVENT PERMANENT DAMAGE

INTRODUCTION

Job sites can get loud — fast. Power tools, cutting, drilling, compressors, and heavy equipment can reach noise levels that permanently damage hearing. The risk builds over time and often goes unnoticed until the damage is already done.

Hearing protection is simple, effective, and required for high-noise tasks. This module shows when to use it, how to wear it correctly, and what protection you'll be issued on site.

WHY IT MATTERS

- Hearing loss is permanent
- Damage happens gradually
- No pain warning
- Fully preventable with PPE

WHEN NOISE IS DANGEROUS

- Must raise voice to talk
- Power tools running
- Compressors / generators
- Heavy equipment
- Ringing after shift

If it sounds loud — protect now.

WHAT DAMAGE LOOKS LIKE

💡 Ringing ears

🚨 Missed alarms

🔊 Muffled hearing

🗣️ Misheard instructions

Exposure adds up — loud + long = damage

TYPES OF PROTECTION

Earplugs

- Lightweight
- All-day wear
- Must be inserted correctly
- Voice sounds deeper when fitted

Earmuffs

- Fast on/off
- Easy fit check
- Good with hardhats
- Must fully seal

HIGH NOISE TASKS

- Concrete cutting
- Heavy impact tools
- Sustained loud machinery
- Supervisor direction

Earplugs + Earmuffs Together

CORRECT USE

Earplugs

1. Roll tight
2. Insert deep
3. Hold 30 seconds
4. Let expand

Earmuffs

- ✓ Centered on ear
- ✓ No seal gaps
- ✓ Band snug
- ✓ Cushions intact

If most of plug is visible → too shallow

FIELD CHECKLIST

Before noisy work:

☒ Protection available

☒ Damaged PPE replaced

☒ Correct type chosen

☒ Crew reminded

☒ Fit verified

☒ READY TO GO

**YOU ONLY GET ONE SET OF EARS.
PROTECT THEM EVERY SHIFT.**

PROTECT YOUR HEARING. PREVENT PERMANENT DAMAGE
